Pv: Thanks Maxime for yet another perspective on agroforestry. Lot of diversity on the topics, great!

PV: Alright! Land Tenure! I was really missing this topic this week, although David Jacke touched upon it briefly

PV: @Maxime: Do you think the model of Terre de Liens compliments agroforestry systems?

JS: Thanks Maxime!

YB: Thanks for the presentation Maxime !

YB: How is this work related to what you are doing at Ver de terre production ?

JB: Thanks for the presentation!

RA: Hello Maxime and all. Kiwai?

RA: Thanks Maxime!

RA: Thanks Thomas! I assume it must be some form of 'kiwi' / Actinidia but wasn't sure.

RA: The image from 'Les Tres Riches Heure du duc de Berry' is used on the cover of Joan Thirsk's book 'Alternative Agriculture' so how appropriate is that?!

<https://oxford.universitypressscholarship.com/view/10.1093/acprof:oso/9780198208136.001.0001/acprof-97>

RA: This is fascinating. The issue of who owns and manages and controls the land is a crucial one.

RA: I know a bit about Britain's land ownership, but not elsewhere. Good source for Britain is Guy Shrubsole's site about England, and he links to information for elsewhere in Britain.

<https://whoownsengland.org/about/>

RA: Yes, we want places to be as you say 'socially alive and socially dynamic'!

RA: Thanks Maxime - very necessary and important work you're doing!

RA: The legal restrictions remind me of the rules for some allotments in Britain where woody perennial plants are not allowed! It is assumed that food crops are all annuals. That is still an assumption by many farmers and growers, so that trees and other pere

RA: I wonder what the equivalent rules, if any, are in Spain and Portugal where there are montado / dehesa landscapes with both cork oaks and holm oaks and other trees and shrubs like strawberry tree, with pasture and annual crops below?

RA: Maxime - I'm reluctantly heading to the next session that's already started - but as it's on the Mediterranean I wonder whether, going back to my last comment, the rules on land use are the same in Corsica as in the rest of France? How are the sweet chest

ES: Maxime will be available for live Q&A in a breakout session starting now, access via the programme tab

TR: @Rowan: Kiwai = hardy kiwi

TR: I agree!

TR: + timber harvest could only take place along rivers and coastlines because transportation was dependant on waterways. Forests were overexploited in these areas + near cities but not elsewhere. Market manipulation indeed!

ML: Yes, actinidia arguta

ML: Tastes better than kiwi I found :)
